Henry David Thoreau

“I Believe there is a subtle magnetism in Nature, which, if we unconsciously yield to it, will direct us aright”

Keeping it Simple

Start with the Six Pillars of Health

Nutritious Food
Clean Water
Clean Air
Exercise
Plenty of Play
Plenty of Sleep

Working Against Nature Causes Stress....

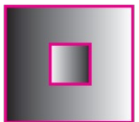

How Children Compensate in an Increasingly Unnatural World?

Is this your Child....?

- Wired but tired?
- Rarely gets sick?
- Trouble falling asleep and staying asleep?
- Light sensitive and has dilated pupils?
- Craving carbohydrates?
- Has delayed language and social skills?
- Pale skin/low muscle tone/rarely tans or burns?
- Has dull hair/slow toenail growth/little no ear wax production?
- Delayed schedule for teeth falling out?

"...In the latest report, scientists at the CDC found that nearly every person they tested was packing a host of nasty chemicals, including flame retardants stored in fatty tissue and Bisphenol A, a hormone-like substance found in plastics, excreted in urine. (2) Even babies are contaminated. The average newborn has 287 chemicals in her umbilical cord blood, 217 of which are neurotoxic (poisonous to nerves or nerve cells)."

How Children Compensate in an Increasingly Stressful World

Homeopathy

The Catalysts

The Theory of Potentisation in Bioenergetic therapies, such as homotoxicology, states that:

Medicinal properties that are **latent** (i.e. Cuttlefish ink) in their crude states become **activated** and kicked into action.

OR

Substances that are **inert** medicinally (i.E. Salt) may become **beneficial** after potentisation

OR

SUBSTANCES that may **toxic** (i.e. belladonna) in their crude form, may become **beneficial** after potentisation

What is Homotoxicology?

Homotoxicology is an approach to healing that integrates the treatment principles of homeopathy with modern, conventional (allopathic) therapeutics. Developed over fifty years ago in Germany by Hans - Heinrich Reckeweg, MD, the goal of homotoxicology is to detoxify the body, utilizing homeopathic remedies, to restore it's natural healing ability - without negatively impacting the active immunity.

Unlike classical homeopathy, which usually dispense one remedy at a time, homotoxicologic preparations incorporate a number of substances into one formulation.

The Body possesses an Innate and Meaningful Biological Response to Removing Toxins

-

“Diseases are the expression of biological purposeful defense mechanisms against endogenic and exogenic homotoxins, or the expression of the organism’s effort to compensate for toxic damages it has sustained.”

- Dr H-H Reckeweg

A System of Healing determined by our reaction to stress

According to Dr. Reckeweg, "diseases" are merely expressions of the fight of the organism against toxins - in its attempt to react and expel them. When the body can no longer remove them, for whatever reason, the organism then tries through increased pathological ways to counteract the damage already manifested. This process functions in six phases:

The Six Phases of Homotoxiology

Excretion phase or the expulsion of toxins through body orifices, e.g. diarrhea, vomiting;

Reaction phase – where toxins are removed by the body reacting against them, e.g. fever, inflammation and mobilization of white blood cells to consume the toxins;

Deposition phase – storage followed by deactivation of the toxins in connective and fat tissue and in the vascular system;

The above phases are naturally “reversible.” The following phases become more and more difficult to deal with as in these processes damage occurs to the organs themselves

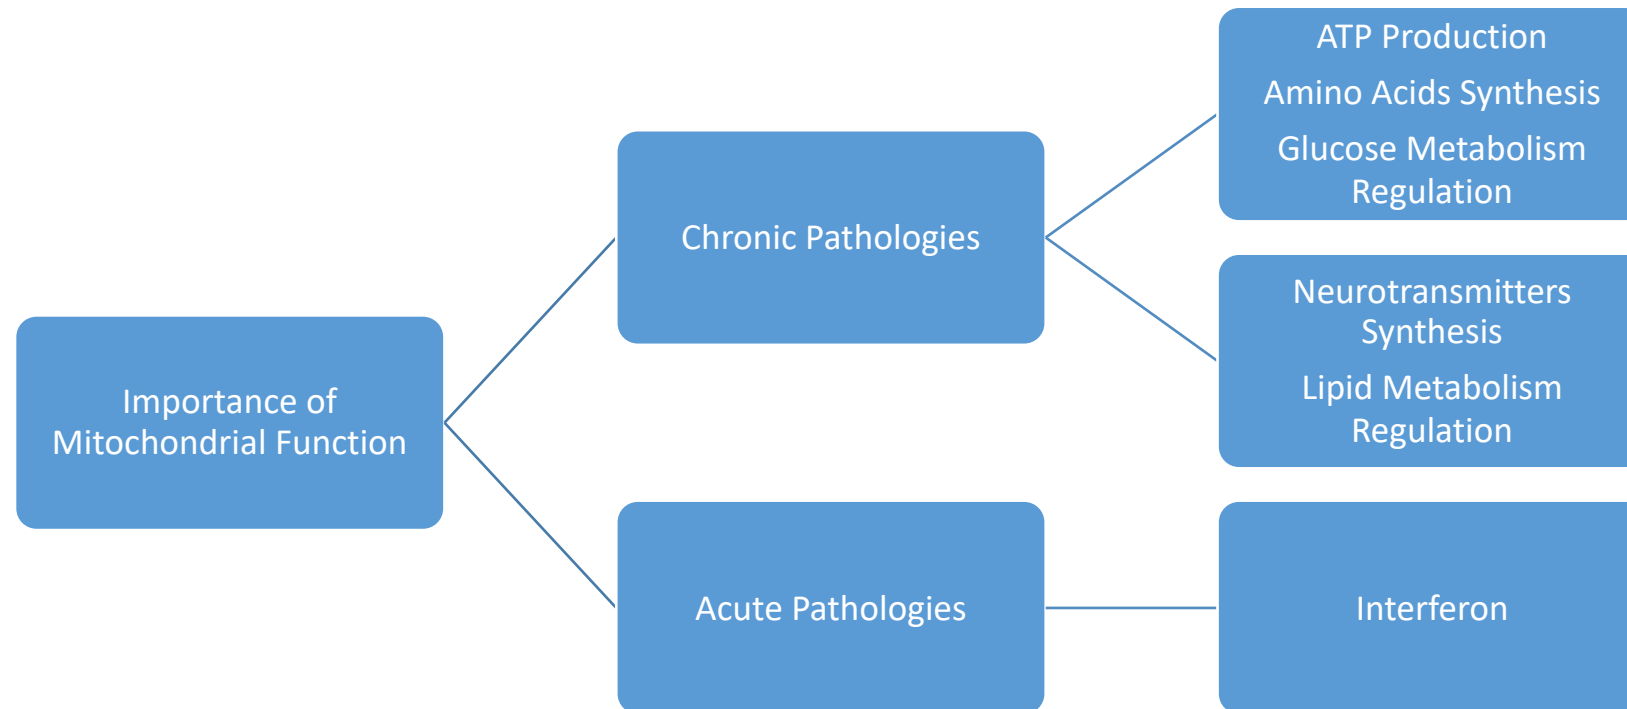

Impregnation phase – severe disease occurs in a “locus minoris resistentiae”, the body’s weakest organ;

Degeneration phase – the organ is increasingly and irreversibly damaged, with alteration of the cellular enzymes and in the organic structure;

Neoplasm or Cancer phase– the cell genes are damaged.

The Herbal Drainage Formulations

- Drainage remedies combine homeopathic tinctures with
- additional homeopathic remedies and herbals of other
- potencies. The low potencies contain biochemically active
- material to promote increased circulation and metabolism of
- specific organ systems. This, in turn, stimulates drainage of
- those organs.

The Never-Ending Dilemma of What to Eat???

- SCD Diet
- GAPS Diet
- Keto Diet
- Paleo Diet
- Feingold Diet
- Low Histamine Diet
